Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT Novel nucleic acid molecule useful for the detection of flagellated
PT bacterial strains in food, feces, etc.
XX
PS Claim 3; Page 229-233; 245pp; English.
XX
CC AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC part of an Escherichia coli flagellin protein except a protein expressed
CC by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC describes a method of detecting the presence of E. coli of a particular H
CC serotype in a sample, comprising specifically hybridising a nucleic acid,
CC preferably at least a pair, derived from a flagellating gene, specific
CC for a particular flagellin gene associated with the H serotype, to any
CC E.coli in the sample which contain the gene, and detecting any hybridised
CC molecules, identifying the presence of that serotype in the sample. (I)
CC are useful for: (1) detecting the presence of E. coli of H serotype in a
CC sample by hybridising at least one or a pair of (I) to any E. coli in the
CC sample and detecting the hybridised nucleic acid molecules; and (2) for
CC detecting the presence of both O and H-serotypes of E. coli by
CC hybridising at least one or a pair of (I) to any E. coli present in the
CC sample and detecting the hybridised nucleic acid molecules. (I) is
CC particularly useful for detecting the combination of O and H antigen.
CC Hybridised (I) when using at least one (I) is detected by southern blot
CC analysis and, when using a pair of (I), is detected by polymerase chain
CC reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC exemplification of the present invention

PS Claim 2; SEQ ID NO 1258; 2067pp; Japanese.
XX
CC The invention relates to a novel enterohaemorragic Escherichia coli
CC O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC has anti-bacterial activity. The polypeptide can be used in detection
CC and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC invention.

PT   New DNA sequences from Escherichia coli strain O157:H7, useful for
PT   detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT   which can be used to distinguish strain O157:H7 from strain K12 using
PT   molecular techniques.
XX
PS   Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising an E. coli
CC   strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC   a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC   enterocyte effacement and 2 genes from its associated lymphocytic phage
CC   933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC   0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC   (which can develop into haemolytic uraemic syndrome). Also included are
CC   an isolated DNA molecule comprising a nucleotide sequence identical to at
CC   least 25 contiguous nucleotides contained in DNA sequences selected from
CC   ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC   found in E.coli K12), a recombinant DNA construction comprising the DNA
CC   above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC   (or distinguishing between 0157 and K12) using a probe derived from one
CC   of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC   O157:H7 in a sample, for the early diagnosis of humans and livestock
CC   infected with O157:H7, and in designing diagnostic probes which can be
CC   used to distinguish strain O157:H7 from strain K12 using molecular
CC   techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC   sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from the USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC   to standardise OS field)

PT Nucleotide peculiar to O-antigen of Escherichia coli O43.
XX
PS Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC specific to the O-antigen of Escherichia coli O43. The nucleotide
CC sequence represents the complete sequence (14309bp) of a gene cluster for
CC controlling the synthesis of O-antigen in Escherichia coli O43. The
CC nucleotide sequence can have one or several inserted, deleted or
CC substituted bases, whilst still retaining its function. Also described is
CC a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC the oligosaccharide unit treatment (gnd) gene, both of which are
CC contained within the E. coli type O43 O-antigen gene cluster. The
CC invention also discloses a method for detecting and identifying E. coli
CC type O43 in humans. This sequence represents the E. coli type O43 O-
CC antigen gene cluster of the invention.

PT Nucleotide peculiar to O-antigen of Shigella dysenteriae type 4 useful
PT for controlling synthesis of O-antigen and detecting and identifying
PT Shigella dysenteriae type 4 in human body.
XX
PS Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC The invention relates to a novel Shigella dysenteriae 4 O-antigen
CC polynucleotide comprising the full-length nucleotide sequence of the gene
CC cluster responsible for controlling O-antigen synthesis in Shigella
CC dysenteriae 4. The cluster includes the glycosyl transferase genes and
CC oligosaccharide unit treatment genes. The polynucleotide of the invention
CC may be used for detecting the O-antigen and thus the Shigella dysenteriae
CC 4 bacterium in the human body or in the environment, using methods such
CC as PCR. The current sequence is that of the Shigella dysenteriae 4 O-
CC antigen gene cluster DNA of the invention which contains the galF, wzx,
CC orf2, orf3, orf4, wzy, orf6, gmd, fcl, gmm, manC, orf11, manB and gnd
CC genes.

PS Claim 14; SEQ ID NO 41909; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15671; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

PT   Nucleotide specific for Escherichia coli 0159 O-antigen.
XX
PS   Claim 1; SEQ ID NO 1; 29pp; Chinese.
XX
CC   The invention relates to a novel nucleotide specific for an Escherichia
CC   coli 0159 O-antigen, which is the total nucleotide sequence of the gene
CC   cluster for controlling the synthesis of O-antigens in Escherichia coli
CC   0159. For example, the isolated nucleotide represented by SEQ ID No:1,
CC   with overall length of 13749 bases, or nucleotide of SEQ ID No:1
CC   including one or more inserted, deleted or substituted bases and sustains
CC   the isolated nucleotide functions, it also includes the oligonucleotides
CC   of glycosyl transferase genes and oligosaccharide unit treatment genes in
CC   the O-antigen gene cluster originating from Escherichia coli 0159. The
CC   invention proves the high specificity of oligonucleotides for Escherichia
CC   coli 0159 O-antigen through PCR. A method for detecting and identifying
CC   Escherichia coli 0159 in the human body and in the environment by means
CC   of the oligonucleotide is also disclosed in the invention. This
CC   polynucleotide sequence represents the DNA of an Escherichia coli 0159 O-
CC   antigen of the invention.

PT   New complexes of protein-protein interactions in Helicobacter pylori,
PT   useful for identifying modulating compounds for treating or preventing
PT   ulcers in mammals.
XX
PS   Claim 7; Page 335; 642pp; English.
XX
CC   The invention describes a complex of protein-protein interactions in
CC   Helicobacter pylori selected from 421 complexes given in the
CC   specification. The complex of protein-protein interactions are useful for
CC   screening for agents which modulate the interaction of proteins.
CC   Modulating compounds which binds to a targeted bacterial protein may be
CC   used for treating or preventing ulcers in a human or animal. This
CC   sequence encodes a selected interacting domain (SID), identified via
CC   protein-protein interactions

PT   Nucleotide specific to 0 antigen of coliform 096 type.
XX
PS   Claim 1; SEQ ID NO 1; 33pp; Chinese.
XX
CC   The invention relates to a nucleotide specific to the O-antigen of
CC   Escherichia coli 096. The invention discloses a complete nucleotide
CC   sequence (SEQ ID No:1) of the gene for controlling the synthesis of the
CC   said O-antigen in E. coli 096. It also includes the oligonucleotide
CC   coming from the glycosyltransferase gene and oligose unit processing gene
CC   of E. coli 096. The process for separating the said complete sequence and
CC   the method for using the said oligonucleotide to detect Escherichia coli
CC   96 are also disclosed. This sequence represents the E. coli O-antigen
CC   biosynthesis gene of the invention.

PT   Polynucleotide specific for Escherichia coli 0156 O-antigen.
XX
PS   Claim 1; SEQ ID NO 1; 31pp; Chinese.
XX
CC   The invention provides a polynucleotide specific for the Escherichia coli
CC   0156 O-antigen, which is the total nucleotide sequence of the gene
CC   cluster for controlling the synthesis of O-antigens in E. coli 0156. It
CC   includes the glycosyl transferase genes and oligosaccharide unit
CC   treatment genes in the O-antigen gene cluster originated from E. coli
CC   0156. The invention includes detecting and identifying E. coli 0156 in
CC   the human body and in the environment (e.g. by PCR). The current sequence
CC   represents the E. coli O156 O-antigen sequence.

XX
PT Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT useful for detecting specific strains in, e.g. food, faeces or patient
PT samples.
XX
PS Claim 6; Fig 7; 165pp; English.
XX
CC This is the nucleotide sequence of a gene cluster involved in the
CC biosynthesis of the Escherichia coli O111 O antigen. The gene cluster was
CC isolated from a cosmid gene bank of E. coli M92 chromosomal DNA by
CC screening with E. coli O111 antiserum. Open reading frames within the
CC gene cluster were identified on the basis of homology to known sequences.
CC The genes encode proteins (see AAW88300-11) involved the synthesis of
CC sugars present in the polysaccharide antigen, and in the transport or
CC processing of polysaccharide or oligosaccharide units. The use of nucleic
CC acid molecules derived from particular assembly and transport genes,
CC particularly wbd (transferase), wzx (flippase) and wzy (polymerase)
CC genes, within O antigen gene clusters improves the specificity of methods
CC for the detection and identification of O antigens, e.g. in testing food-
CC or faecal-derived samples, or samples from patients. The O antigen is a
CC major virulence factor of enteropathogenic E. coli strains that cause
CC diarrhoea and haemorrhagic colitis

PT Novel nucleic acid molecule useful for the detection of flagellated
PT bacterial strains in food, feces, etc.
XX
PS Claim 3; Page 216-221; 245pp; English.
XX
CC AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC part of an Escherichia coli flagellin protein except a protein expressed
CC by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC describes a method of detecting the presence of E. coli of a particular H
CC serotype in a sample, comprising specifically hybridising a nucleic acid,
CC preferably at least a pair, derived from a flagellating gene, specific
CC for a particular flagellin gene associated with the H serotype, to any
CC E.coli in the sample which contain the gene, and detecting any hybridised
CC molecules, identifying the presence of that serotype in the sample. (I)
CC are useful for: (1) detecting the presence of E. coli of H serotype in a
CC sample by hybridising at least one or a pair of (I) to any E. coli in the
CC sample and detecting the hybridised nucleic acid molecules; and (2) for
CC detecting the presence of both O and H-serotypes of E. coli by
CC hybridising at least one or a pair of (I) to any E. coli present in the
CC sample and detecting the hybridised nucleic acid molecules. (I) is
CC particularly useful for detecting the combination of O and H antigen.
CC Hybridised (I) when using at least one (I) is detected by southern blot
CC analysis and, when using a pair of (I), is detected by polymerase chain
CC reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC exemplification of the present invention

PT Nucleotide peculiar to O-antigen of Shigella boydii 17 useful for
PT controlling synthesis of O-antigen and detecting and identifying Shigella
PT in human body.
XX
PS Claim 1; SEQ ID NO 1; 35pp; Chinese.
XX
CC The invention relates to a novel Shigella boydii 17 O-antigen
CC polynucleotide comprising the full-length nucleotide sequence of the gene
CC cluster responsible for controlling O-antigen synthesis in Shigella
CC boydii 17. The cluster includes the glycosyl transferase genes and
CC oligosaccharide unit treatment genes. The polynucleotide of the invention
CC may be used for detecting the O-antigen and thus the Shigella boydii 17
CC bacterium in the human body or in the environment, using methods such as
CC PCR. The current sequence is that of the Shigella boydii 17 O-antigen
CC gene cluster DNA of the invention which contains the galF, wzx, orf2,
CC orf3, wzy, orf5, gne, orf7 and gnd genes.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                     /clone_lib="SHGC-CGX"
                     /note="Vector: Express 1; Total and poly A+ RNA was
                     isolated from the indicated stickleback tissue, and a cDNA
                     library was constructed in the Express 1 plasmid vector by
                     Open Biosystems. First strand cDNA synthesis was primed
                     with an 54 bp linker primer containing an oligodT sequence
                     preceeded by a synthetic NotI site (first strand primer:
                     5'-GACTAGTTCTAGATCGCGAGCGGCCGCCC(T)25-3'). Following
                     second strand synthesis, cDNAs were made blunt at the end
                     corresponding to the original 5 prime end of mRNA, and
                     cloned directionally into the NotI and EcoRV sites of
                     Express 1. Note that the EcoRV site is typically destroyed
                     in the blunt end cloning, leaving a junction of the form
                     'xxxATC'(where is ATC is the second half of the EcoRV
                     site, and xxx is derived from the cDNA sequence). A map of
                     the Express 1 vector is available at:
                     http://www.openbiosystems.com/cdna_library_construction_fa
                     q.php#8 The primary library was transformed and amplified
                     in DH10B (T1 phage resistant) bacteria. Clones available
                     from Open Biosystems:
                     http://www.openbiosystems.com/stickleback"

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 11
AY730592
LOCUS AY730592 14224 bp DNA linear BCT 02-NOV-2004
DEFINITION Citrobacter freundii serotype 90 UDP-glucose pyrophosphorylase (galF) gene, partial cds; O-antigen gene cluster, complete sequence; and 6-phosphogluconate dehydrogenase (gnd) gene, partial cds.
ACCESSION AY730592
VERSION AY730592.2 GI:55228555
KEYWORDS .
SOURCE Citrobacter freundii
ORGANISM Citrobacter freundii
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Citrobacter.
REFERENCE 1 (bases 1 to 14224)
AUTHORS Samuel,G., Hogbin,J.P., Wang,L. and Reeves,P.R.
TITLE Relationships of the Escherichia coli O157, O111, and O55 O-Antigen Gene Clusters with Those of Salmonella enterica and Citrobacter freundii, Which Express Identical O Antigens
JOURNAL J. Bacteriol. 186 (19), 6536-6543 (2004)
PUBMED 15375135
REFERENCE 2 (bases 1 to 14224)
AUTHORS Reeves,P.R., Samuel,G., Hogbin,J.-P. and Wang,L.
TITLE Direct Submission
JOURNAL Submitted (23-AUG-2004) School of Molecular and Microbial Biosciences, University of Sydney, Sydney, NSW 2006, Australia
REFERENCE 3 (bases 1 to 14224)
AUTHORS Reeves,P.R., Samuel,G., Hogbin,J.-P. and Wang,L.
TITLE Direct Submission
JOURNAL Submitted (02-NOV-2004) School of Molecular and Microbial Biosciences, University of Sydney, Sydney, NSW 2006, Australia
REMARK Sequence update by submitter
COMMENT On Nov 2, 2004 this sequence version replaced gi:54401406.

  TITLE     Trypanosoma brucei GUTat10.1 RPCI93-3H15 BAC genomic sequence
  JOURNAL   Unpublished
REFERENCE   2  (bases 1 to 155204)
  AUTHORS   El-Sayed,N.M., Khalak,H. and Adams,M.D.
  TITLE     Direct Submission
  JOURNAL   Submitted (28-JUN-1999) The Institute for Genomic Research, 9712
            Medical Center Dr, Rockville, MD 20850, USA
COMMENT     On Jul 17, 2001 this sequence version replaced gi:12746529.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 1 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1   155204: contig of 155204 bp in length.

            -------------- Project Information
            Center project name: zK3L24
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 217427 bases at least Q40
            Consensus quality: 219130 bases at least Q30
            Consensus quality: 220818 bases at least Q20
            Insert size: 223881; sum-of-contigs
            Insert size: 219000; 7.3% error; agarose-fp
            Quality coverage: 6.82x in Q20 bases; sum-of-contigs Quality
            coverage: 7.43x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 18 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    20602: contig of 20602 bp in length
            *    20603    20702: gap of 100 bp
            *    20703    57831: contig of 37129 bp in length

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml DKEY-46N5
            is from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5.

            -------------- Project Information
            Center project name: zC166E11
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 153972 bases at least Q40
            Consensus quality: 154337 bases at least Q30
            Consensus quality: 154522 bases at least Q20
            Insert size: 155385; sum-of-contigs
            Insert size: 153983; 2.8% error; agarose-fp
            Quality coverage: 7.38x in Q20 bases; sum-of-contigs Quality
            coverage: 7.70x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    10134: contig of 10134 bp in length
            *    10135    10234: gap of 100 bp
            *    10235   111588: contig of 101354 bp in length
            *   111589   111688: gap of 100 bp
            *   111689   123934: contig of 12246 bp in length
            *   123935   124034: gap of 100 bp
            *   124035   133984: contig of 9950 bp in length
            *   133985   134084: gap of 100 bp
            *   134085   149579: contig of 15495 bp in length
            *   149580   149679: gap of 100 bp
            *   149680   155885: contig of 6206 bp in length.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT Novel nucleic acid molecule useful for the detection of flagellated
PT bacterial strains in food, feces, etc.
XX
PS Claim 3; Page 229-233; 245pp; English.
XX
CC AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC part of an Escherichia coli flagellin protein except a protein expressed
CC by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC describes a method of detecting the presence of E. coli of a particular H
CC serotype in a sample, comprising specifically hybridising a nucleic acid,
CC preferably at least a pair, derived from a flagellating gene, specific
CC for a particular flagellin gene associated with the H serotype, to any
CC E.coli in the sample which contain the gene, and detecting any hybridised
CC molecules, identifying the presence of that serotype in the sample. (I)
CC are useful for: (1) detecting the presence of E. coli of H serotype in a
CC sample by hybridising at least one or a pair of (I) to any E. coli in the
CC sample and detecting the hybridised nucleic acid molecules; and (2) for
CC detecting the presence of both O and H-serotypes of E. coli by
CC hybridising at least one or a pair of (I) to any E. coli present in the
CC sample and detecting the hybridised nucleic acid molecules. (I) is
CC particularly useful for detecting the combination of O and H antigen.
CC Hybridised (I) when using at least one (I) is detected by southern blot
CC analysis and, when using a pair of (I), is detected by polymerase chain
CC reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC exemplification of the present invention

PT   Enterohemorragic Escherichia coli O157:H7-specific nucleic acid molecule
PT   and a polypeptide and its use, a polypeptide, a vector and a host cell.
XX
PS   Claim 2; SEQ ID NO 1258; 2067pp; Japanese.
XX
CC   The invention relates to a novel enterohaemorragic Escherichia coli
CC   O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC   has anti-bacterial activity. The polypeptide can be used in detection
CC   and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC   genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC   sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC   invention.

PT   New DNA sequences from Escherichia coli strain O157:H7, useful for
PT   detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT   which can be used to distinguish strain O157:H7 from strain K12 using
PT   molecular techniques.
XX
PS   Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising an E. coli
CC   strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC   a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC   enterocyte effacement and 2 genes from its associated lymphocytic phage
CC   933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC   0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC   (which can develop into haemolytic uraemic syndrome). Also included are
CC   an isolated DNA molecule comprising a nucleotide sequence identical to at
CC   least 25 contiguous nucleotides contained in DNA sequences selected from
CC   ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC   found in E.coli K12), a recombinant DNA construction comprising the DNA
CC   above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC   (or distinguishing between 0157 and K12) using a probe derived from one
CC   of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC   O157:H7 in a sample, for the early diagnosis of humans and livestock
CC   infected with O157:H7, and in designing diagnostic probes which can be
CC   used to distinguish strain O157:H7 from strain K12 using molecular
CC   techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC   sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from the USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC   to standardise OS field)

XX
CC The present invention describes a purified Anopheles gambiae olfaction
CC polypeptide comprising a 383, 394, 380, 411, 412, 391, 157 or 401 residue
CC amino acid sequence (see ABP52833 to ABP52840) (S1), a conservatively
CC modified amino acid sequence of them, or a sequence of (S1) with at least
CC 20 consecutive residues. Also described: (1) an isolated polynucleotide
CC comprising: (a) a nucleotide sequence encoding the purified Anopheles
CC gambiae olfaction polypeptide; or (b) a nucleotide sequence that
CC hybridises under stringent conditions to a hybridisation probe comprising
CC a 1964, 1239, 1142, 1236, 1194, 1176, 474 or 1206 nucleotide sequence
CC (see ABQ75102 to ABQ75105 and ABQ75110 to ABQ75113) (S2), or its
CC complement; and (2) a method for identifying an agent that binds to
CC mosquito olfaction molecules comprising: (a) providing an isolated
CC mosquito olfaction molecule; (b) contacting a test agent with the
CC isolated mosquito olfaction molecule; and (c) detecting specific binding
CC of the test agent to the isolated mosquito olfaction molecule, where the
CC presence of specific binding identifies the test agent as a mosquito
CC olfaction-binding compound. The mosquito olfaction molecules are useful
CC for mosquito management, i.e. controlling this pest and disease vector. A
CC method from the present invention of screening for substances that
CC modulate arrestin-odourant receptor interaction is useful for identifying
CC pest control agents. The present sequence represents Anopheles gambiae
CC odourant receptor 2 genomic DNA from the present invention. N.B. The
CC features given in figure 4a are tentative and do not directly encode SEQ
CC ID NO:6 (ABP52835)

PT   New mosquito arrestin 1 and 2 genes and polypeptides, useful for
PT   identifying mosquito olfaction molecule binding compounds which reduce
PT   the ability of mosquitoes to locate sources of bloodmeal, e.g. humans.
XX
PS   Disclosure; Fig 4a; 101pp; English.
XX
CC   The present sequence is that of genomic DNA encoding a novel mosquito
CC   olfaction molecule, odorant receptor 2. A cDNA sequence for odorant
CC   receptor 2 is given in ACF79719. The invention provides 9 novel mosquito
CC   polypeptides and the nucleic acids encoding them. These are odorant
CC   receptor molecules 1-7 and arrestins 1 and 2. The odorant receptors
CC   function in a ligand-induced signal transduction pathway for the
CC   activation of mosquito olfaction. Arrestin functions to inhibit the
CC   activated signal transduction cascade. Thus, the odorant receptors act as
CC   an 'on' switch, and arrestin as an 'off' switch for the odorant detection
CC   system of the mosquito. Methods are provided for identifying compounds
CC   that interfere with the operation of the mosquito olfactory system,
CC   particularly compounds that modulate arrestin 2 activity. These are
CC   useful for the control of mosquitoes, particularly by reducing their
CC   ability to locate sources of bloodmeal

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 14450; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
```

```
CC   is used in the exemplification of the invention

PT   Detecting and differentiating between hematopoietic cell proliferative
PT   disorders, comprises contacting a target nucleic acid with a reagent that
PT   distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS   Claim 28; SEQ ID NO 386; 117pp; English.
XX
CC   The present invention describes a method for detecting and
CC   differentiating between haematopoietic cell proliferative disorders
CC   associated with at least 1 gene and/or their regulatory regions in a
CC   subject. The method comprises contacting a target nucleic acid in a
CC   biological sample obtained from the subject with at least 1 reagent,
CC   which distinguishes between methylated and non-methylated CpG
CC   dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC   represent specifically claimed nucleotide sequences from the present
CC   invention. Oligonucleotides from the present invention can be used: for
CC   differentiating between healthy haematopoietic cells and proliferative
CC   disorder haematopoietic cells; for differentiating between acute
CC   lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC   determining the cytosine methylation state and/or single nucleotide
CC   polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC   related sequences and their complements; and as primers for the
CC   amplification of haematopoietic cell proliferation disorder related DNA
CC   sequences. The nucleotide sequences from the present invention can also
CC   be used for detecting a predisposition to, differentiation between
CC   subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC   haematopoietic cell proliferative disorders. The present method enables a
CC   highly specific classification of haematopoietic cell proliferative
CC   disorders allowing for improved and informed treatment of patients

PT   New purified nucleic acid for producing a soybean plant having soybean
PT   cyst nematode resistance and for use in plant breeding programs.
XX
PS   Claim 2; Page 204-400; 1353pp; English.
XX
CC   The invention relates to nucleic acid molecules from regions of the
CC   soybean genome which are associated with soybean cyst nematode (SCN)
CC   resistance. The nucleic acids are used to transform plants, and can
CC   produce soybean plants having an rhg1 or an Rhg4 SCN resistant allele.
CC   The nucleic acids can be used for investigating rhg1 or Rhg4 haplotypes
CC   of soybean plants and for introgressing SCN resistance or partial SCN
CC   resistance into soybean plants. They can also be used in plant breeding
CC   programmes. The invention also relates to proteins encoded by such
CC   nucleic acid molecules, as well as antibodies capable of recognising
CC   these proteins. The present sequence is a nucleic acid molecule provided
CC   in the specification

PS Claim 1; SEQ ID NO 836; 32pp + Sequence Listing; German.
XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site_1: BamHI; Site_2: BglII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zmdb.iastate.edu' and follow the links for 'RescueMu.' Grid S was grown at San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BglII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."

  TITLE     Direct Submission
  JOURNAL   Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

  TITLE     Direct Submission
  JOURNAL   Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALW243431
LOCUS ALW243431 26953 bp DNA linear BCT 15-APR-2005
DEFINITION Acinetobacter lwoffii wzc, wzb, wza, weeA, weeB, wceC, wzx, wzy, weeD, weeE, weeF, weeG, weeH, weeI, weeJ, weeK, galU, ugd, pgi, galE, pgm (partial) and mip (partial) genes (emulsan biosynthetic gene cluster), strain RAG-1.
ACCESSION AJ243431
VERSION AJ243431.1 GI:6009984
KEYWORDS acetyltransferase; amino-transferase; dehydrogenase; dTDP-glucose-4,6-dehydratase; emulsan repeating unit flippase; emulsan repeating unit polymerase; galactoside acetyltransferase; galE gene; galU gene; glycosyl transferase; macrophage infectivity potentiator; MIP gene; NDP-N-Acetyl-D-Galactosaminuronic acciddehydrogenase; outer membrane protein; pgi gene; pgm gene; phosphoglucomutase; phosphoglucose isomerase; protein tyrosine kinase; protein tyrosine phosphatase; UDP-galactose phosphate transferase; UDP-glucose 4-epimerase; UDP-glucose dehydrogenase; UDP-N-acetylglucosamine 2-epimerase; ugd gene; UTP-glucose-1-phosphate uridylyltransferase; weeA gene; weeB gene; weeC gene; weeD gene; weeE gene; weeF gene; weeG gene; weeH gene; weeI gene; weeJ gene; weeK gene; wza gene; wzb gene; wzc gene; wzx gene; wzy gene.
SOURCE Acinetobacter lwoffii
ORGANISM Acinetobacter lwoffii
Bacteria; Proteobacteria; Gammaproteobacteria; Pseudomonadales; Moraxellaceae; Acinetobacter.
REFERENCE 1
AUTHORS Nakar,D. and Gutnick,D.L.
TITLE A protein tyrosine kinase of Acinetobacter lwoffii RAG-1 is involved in emulsan biosynthesis
JOURNAL Unpublished
REFERENCE 2
AUTHORS Nakar,D. and Gutnick,D.L.
TITLE Genomic organization of the wce region of Acinetobacter lwoffii RAG-1 required for emulsan biosynthesis
JOURNAL Unpublished
REFERENCE 3 (bases 1 to 26953)
AUTHORS Gutnick,D.L.
TITLE Direct Submission
JOURNAL Submitted (29-JUN-1999) Gutnick D.L., Molecular Microbiology and Biotechnology, The George S. Wise Faculty of Life Sciences, Tel-Aviv University, Ramat Aviv, 69978, ISRAEL
REMARK Revised by author 19-JUL-1999

  TITLE     Direct Submission
  JOURNAL   Submitted (29-JUN-2004) Genoscope - Centre National de Sequencage :
            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Annotation data relative to COG assignations, enzymatic function
            prediction (PRIAM software), TMHMM and SignalP predictions, and
            synteny results (Syntonizer software) are available in
            Acinetobacter database
            (http://www.genoscope.cns.fr/agc/mage/acinetopublic). See this web
            site
            (http://www.genoscope.cns.fr/externe/English/Projets/Projet_DY) for
            more information on the overall project.
            Each annotation includes a confidence level as follow: 1  :
            Function experimentally demonstrated in the studied organism 2a :
            Function of homologous gene experimentally demonstrated in an other
                 organism
            2b : Function of strongly homologous gene
            3  : Function proposed based on presence of conserved amino acid
            motif,
                 structural feature or limited homolgy
            4  : Homolgs of previously reported genes of unknown function 5  :
            No homology to any previously reported sequences 6  : Doubtful CDS
            7  : Gene remnant
            Classification of gene products by their type and by their cellular
            role(s) was made with the MultiFun system
            (http://genprotec.mbl.edu/).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 229-233; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

CC   The invention relates to a novel enteroHaemorragic Escherichia coli
CC   O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC   has anti-bacterial activity. The polypeptide can be used in detection
CC   and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC   genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC   sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC   invention.

PT New DNA sequences from Escherichia coli strain O157:H7, useful for
PT detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT which can be used to distinguish strain O157:H7 from strain K12 using
PT molecular techniques.
XX
PS Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC The invention relates to an isolated DNA molecule comprising an E. coli
CC strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC enterocyte effacement and 2 genes from its associated lymphocytic phage
CC 933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC 0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC (which can develop into haemolytic uraemic syndrome). Also included are
CC an isolated DNA molecule comprising a nucleotide sequence identical to at
CC least 25 contiguous nucleotides contained in DNA sequences selected from
CC ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC found in E.coli K12), a recombinant DNA construction comprising the DNA
CC above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC (or distinguishing between 0157 and K12) using a probe derived from one
CC of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC O157:H7 in a sample, for the early diagnosis of humans and livestock
CC infected with O157:H7, and in designing diagnostic probes which can be
CC used to distinguish strain O157:H7 from strain K12 using molecular
CC techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from the USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC to standardise OS field)

XX
CC   The invention relates to isolated Acinetobacter baumannii nucleic acids.
CC   The A. baumannii nucleic acids and polypeptides are useful as reagents
CC   for diagnosing a bacterial disease, as components of antibacterial
CC   vaccines, as targets for antibacterial drugs, to detect the presence of
CC   A. baumannii and other Acinetobacter species in a sample, in screening
CC   compounds for the ability to interfere with the A. baumannii life cycle
CC   or to inhibit A. baumannii infection, and as biocontrol agents for
CC   plants. The present sequence represents DNA encoding an A. baumannii
CC   protein.

XX
CC   The invention relates to a nucleotide sequence (SEQ ID No:1) which is
CC   specific to the O-antigen of Escherichia coli O49. The nucleotide
CC   sequence represents the complete sequence (14256bp) of a gene cluster for
CC   controlling the synthesis of O-antigen in Escherichia coli O49. The
CC   nucleotide sequence can have one or several inserted, deleted or
CC   substituted bases, whilst still retaining its function. Also described is
CC   a PCR primer for the glycosyltransferase (galF) gene and a PCR primer for
CC   the oligosaccharide unit treatment (gnd) gene, both of which are
CC   contained within the E. coli type O49 O-antigen gene cluster. The
CC   invention also discloses a method for detecting and identifying E. coli
CC   type O49 in humans. This sequence represents the E. coli type O49 O-
CC   antigen gene cluster of the invention.

PT   New antisense nucleic acids, useful for identifying proteins or screening
PT   for homologous nucleic acids required for cellular proliferation to
PT   isolate candidate molecules for rational drug discovery programs.
XX
PS   Claim 14; SEQ ID NO 35663; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
```

```
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Identifying and selecting a gene required for the proliferation in vivo
PT   of a pathogenic microorganism comprises determining the virulence of
PT   mutant genes on an experimental model of infection, and their effect on
PT   enteric colonization.
XX
PS   Claim 5; SEQ ID NO 25; 60pp; English.
XX
CC   The present invention relates to a method for identifying and selecting a
CC   gene required for the proliferation in vivo of a pathogenic
CC   microorganism. The method comprises determining the virulence of mutant
CC   genes on an experimental model of infection, and their effect on enteric
CC   colonization in an axenic mouse model. ADH88967-ADH88981 and ADH88982-
CC   ADH88996 are pathogenicity or virulence targets and their coding
CC   sequences which were used in the method of the invention. Compounds'
CC   capable of inhibiting pathogenicity or virulence target expression are
CC   useful for developing medicinal products for inhibiting a bacterial
CC   infection, in particular an extra-intestinal infection in the case of
CC   enterobacteria.

PT   Novel polynucleotides derived from Coryneform bacteria, for identifying
PT   mutation point of a gene, measuring expression of a gene, analyzing
PT   expression profile or pattern of a gene and identifying homologous gene.
XX
PS   Claim 8; SEQ ID NO 406; 246pp + Sequence Listing; English.
XX
CC   The present invention provides a number of nucleotide and protein
CC   sequences from the Coryneform bacterium Corynebacterium glutamicum. These
CC   are useful for identifying the mutation point of a gene derived from a
CC   mutant of coryneform bacterium, measuring expression amount and analysing
CC   the expression profile or expression pattern of a gene derived from
CC   Coryneform bacterium, and identifying a homologue of a gene derived from
CC   coryneform bacterium. Coryneform bacteria are useful for producing amino
CC   acids, nucleic acids, vitamins, saccharides and organic acids,
CC   particularly L-lysine. The present sequence is a nucleic acid described
CC   in the exemplification of the invention. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from the European Patent Office

PT New nucleic acid array useful for monitoring mRNA expression of
PT Corynebacterium glutamicum during fermentation, comprising nucleic acid
PT from Corynebacterium glutamicum.
XX
PS Claim 1; Page 682; 709pp; German.
XX
CC This invention describes a novel nucleic acid array involving
CC Corynebacterium glutamicum polynucleotides. The arrays are used to
CC analyse C. glutamicum, particularly for monitoring a fermentation process
CC to determine expression levels of C. glutamicum cellular mRNA. Such
CC monitoring particularly differentiates between expression levels of
CC different strains of C. glutamicum and allows the adjustment of different
CC culture and fermentation conditions. ACA00010-ACA02188 represent C.
CC glutamicum derived polynucleotides described in the disclosure of the
CC invention

PS Claim 6; SEQ ID NO 3429; 49pp; English.
XX
CC The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus genes of the invention

PT New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
PS Claim 27; SEQ ID NO 4528; 511pp; English.
XX
CC The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence encodes an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent

PT   isolate candidate molecules for rational drug discovery programs.
XX
PS   Claim 14; SEQ ID NO 8128; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

JOURNAL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

TITLE Direct Submission
JOURNAL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            ABRC Stock Number CS847096; T-DNA left border flanking sequences of
            Syngenta Arabidopsis Insertion Library (SAIL) lines are available
            through the Arabidopsis Biological Resource Center (ABRC).
            Sequences represent a pool of amplified genomic regions and not
            single contiguous sequences.
            Class: TDNA tagged.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0466K09
            --------------.

            NOTICE:
```

```
This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male
donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
approach for construction of bacterial artificial chromosome
libraries. Genomics 51:1-8. The clone may be obtained either from
Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
and coworkers at http://www.chori.org
VECTOR:  pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is RP11-290K24, 200 base pair
overlap.  Actual start of this clone is at base position 1 of
RP11-466K9; actual end is at base position 56196 of RP11-290K24.

The sequence from base position 59086 to 59456 represents the best
possible assembly of an imperfect dinucleotide repeat.  This region
contains areas of low quality and may contain ambiguous bases.  The
region from 59376 to 59397 is covered only by PCR from BAC DNA.
Size of the assembly is consistent with information from PCR as
well as digest.

There are polymorphic differences in the overlap between
H_NH0466K09 and H_NH0290K24.

            Institute, Department of Plant Gene Research; 1532-3, Yana,
            Kisarazu, Chiba 292-0812, Japan (E-mail:ynakamu@kazusa.or.jp,
            Tel:81-438-52-3935, Fax:81-438-52-3934)
COMMENT     Address for correspondence: kaos@kazusa.or.jp
            For the latest information on annotation of this clone, please see
            http://www.kazusa.or.jp/kaos/cgi-bin/agd_graph.cgi?c=K13P22
            Genes with similarity to proteins in the databases are described in
            'product' or 'note' qualifiers.  Genes that have no significant
            protein similarity are described as 'unknown protein'.
            The software programs used to predict genes include: Grail
            (Informatics Group, Oak Ridge National Laboratory,
            http://compbio.ornl.gov/Grail-1.3/),
            GENSCAN (Chris Burge, MIT, http://CCR-081.mit.edu/GENSCAN.html),
            NetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
            Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and
            SplicePredictor (Volker Brendel, Stanford University,
            http://gremlin1.zool.iastate.edu/cgi-bin/sp.cgi).
            Genes encoding tRNAs are predicted by tRNAscan-SE
            (Sean Eddy, Washington University School of Medicine, St. Louis,
            http://genome.wustl.edu/eddy/tRNAscan-SE/).
            This sequence may not be the entire insert of this clone. It may be
            shorter because we remove overlaps between neighboring submissions.
            The 5' clone is MBG8 and the 3' clone is MCO15.

Center code: SC
Web site: http://www.sanger.ac.uk
Contact: zfish-help@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.
Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to anchor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but repeat copies may not be in the correct order and the usual finishing criteria may not apply. DKEY-40N15 is from a Zebrafish BAC library
VECTOR: pIndigoBAC-5.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 229-233; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
```

```
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

PT   Enterohemorragic Escherichia coli O157:H7-specific nucleic acid molecule
PT   and a polypeptide and its use, a polypeptide, a vector and a host cell.
XX
PS   Claim 2; SEQ ID NO 1258; 2067pp; Japanese.
XX
CC   The invention relates to a novel enterohaemorragic Escherichia coli
CC   O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC   has anti-bacterial activity. The polypeptide can be used in detection
CC   and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC   genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC   sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC   invention.

PT   New DNA sequences from Escherichia coli strain O157:H7, useful for
PT   detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT   which can be used to distinguish strain O157:H7 from strain K12 using
PT   molecular techniques.
XX
PS   Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising an E. coli
CC   strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC   a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC   enterocyte effacement and 2 genes from its associated lymphocytic phage
CC   933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC   0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC   (which can develop into haemolytic uraemic syndrome). Also included are
CC   an isolated DNA molecule comprising a nucleotide sequence identical to at
CC   least 25 contiguous nucleotides contained in DNA sequences selected from
CC   ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC   found in E.coli K12), a recombinant DNA construction comprising the DNA
CC   above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC   (or distinguishing between 0157 and K12) using a probe derived from one
CC   of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC   O157:H7 in a sample, for the early diagnosis of humans and livestock
CC   infected with O157:H7, and in designing diagnostic probes which can be
CC   used to distinguish strain O157:H7 from strain K12 using molecular
CC   techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC   sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from the USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC   to standardise OS field)

PT New stress-responsive nucleic acid, useful for altering the
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT stress, salt stress or osmotic stress.
XX
PS Claim 48; SEQ ID NO 13926; 89pp; English.
XX
CC The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

XX
CC Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
CC molecules associated with the cell cycle and specific PCR primers of the
CC invention. The sequences are useful for detecting the methylation state
CC of all CpG dinucleotides in a sequence and therefore for analysing
CC associated diseases. By analysing cytosine methylations in the pretreated
CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
CC of existing diseases or the predisposition to specific diseases can be
CC ascertained. The parameters may be compared to another set of genetic
CC and/or epigenetic parameters, the differences serving as basis for
CC diagnosis and/or prognosis events which are disadvantageous to patients.
CC The sequences of the invention are useful for the diagnosis and therapy
CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,
CC aging, glomerular disease, Lewy body disease, arthritis,
CC arteriosclerosis, solid tumours and cancers

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 13926; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
```

CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            Zuechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany
COMMENT     This sequence has been recovered from the left border of the T-DNA.
            It indicates an insertion within the locus defined by BAC clone
            K13P22. Details on the protocols used for generation of the
            sequence are described in References 1-3. The sequences are
            generated at the MPI for Plant Breeding Research in the context of
            the GABI-Kat project. GABI-Kat is part of the German Plant Genomics
            program designated 'GABI'. Information on line availability can be
            found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            Email: bento-soares@uiowa.edu
            The sequence contained an oligo-dT track that was present in the
            oligonucleotide that was used to prime the synthesis of first
            strand cDNA and therefore this may represent a bonafide poly A
            tail. The sequence tag present in the cDNA between the NotI site
            and the oligo-dT track served to verify it as a clone from the
            non-normalized rat cell line R3327-5a library cDNA Library
            Preparation: M.B. Soares Lab Clone distribution: clones will be
            available through Research Genetics (www.resgen.com)
            Seq primer: M13 Forward
            POLYA=Yes.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

            -------------- Project Information
            Center project name: zC223F21
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 187632 bases at least Q40
            Consensus quality: 187888 bases at least Q30
            Consensus quality: 188392 bases at least Q20
            Insert size: 189856; sum-of-contigs
            Insert size: 198701; 0.8% error; agarose-fp
            Quality coverage: 8.57x in Q20 bases; sum-of-contigs Quality
            coverage: 8.26x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    11266: contig of 11266 bp in length
            *    11267    11366: gap of 100 bp
            *    11367    28114: contig of 16748 bp in length
            *    28115    28214: gap of 100 bp
            *    28215   150363: contig of 122149 bp in length
            *   150364   150463: gap of 100 bp
            *   150464   171430: contig of 20967 bp in length
            *   171431   171530: gap of 100 bp
            *   171531   181870: contig of 10340 bp in length
            *   181871   181970: gap of 100 bp
            *   181971   190356: contig of 8386 bp in length.

```

Chemistry: Dye-terminator Big Dye; 60% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 175145 bases at least Q40
Consensus quality: 175352 bases at least Q30
Consensus quality: 175369 bases at least Q20
Insert size: 175370; sum-of-contigs
Quality coverage: 8.3x in Q20 bases; sum-of-contigs

Overlapping Sequences:
5': RP11-776K4 (UWGC:bc0559) AC105750, 50334-bp overlap
3': RP11-464H2 (UWGC:bc0433) AC099053

Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 6; Fig 8; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Escherichia coli O157 O antigen. The gene cluster was
CC   obtained by PCR amplification of E. coli O157:H7 strain (C664-1992) DNA
CC   using primers (see AAX06752-63) based on O antigen gene sequences. 12
CC   Open reading frames within the gene cluster were identified on the basis
CC   of homology to known sequences. The genes encode proteins (see AAW88312-
CC   23) involved the synthesis of sugars present in the polysaccharide
CC   antigen, and in the transport or processing of polysaccharide or
CC   oligosaccharide units. The use of nucleic acid molecules derived from
CC   particular assembly and transport genes, particularly wbd (transferase),
CC   wzx (flippase) and wzy (polymerase) genes, within O antigen gene clusters
CC   improves the specificity of methods for the detection and identification
CC   of O antigens, e.g. in tests of food- or faecal- derived samples, or
CC   samples from patients. The O antigen is a major virulence factor of
CC   enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic
CC   colitis

PT   Novel nucleic acid molecule useful for the detection of flagellated
PT   bacterial strains in food, feces, etc.
XX
PS   Claim 3; Page 229-233; 245pp; English.
XX
CC   AAZ56331 to AAZ56398 represent nucleic acid molecules (I) encoding all or
CC   part of an Escherichia coli flagellin protein except a protein expressed
CC   by E. coli H1, H7, H12 or H48 type strains. The present invention also
CC   describes a method of detecting the presence of E. coli of a particular H
CC   serotype in a sample, comprising specifically hybridising a nucleic acid,
CC   preferably at least a pair, derived from a flagellating gene, specific
CC   for a particular flagellin gene associated with the H serotype, to any
CC   E.coli in the sample which contain the gene, and detecting any hybridised
CC   molecules, identifying the presence of that serotype in the sample. (I)
CC   are useful for: (1) detecting the presence of E. coli of H serotype in a
CC   sample by hybridising at least one or a pair of (I) to any E. coli in the
CC   sample and detecting the hybridised nucleic acid molecules; and (2) for
CC   detecting the presence of both O and H-serotypes of E. coli by
CC   hybridising at least one or a pair of (I) to any E. coli present in the
CC   sample and detecting the hybridised nucleic acid molecules. (I) is
CC   particularly useful for detecting the combination of O and H antigen.
CC   Hybridised (I) when using at least one (I) is detected by southern blot
CC   analysis and, when using a pair of (I), is detected by polymerase chain
CC   reaction (PCR). AAZ56399 to AAZ56420 represent primers used in the
CC   exemplification of the present invention

PT Enterohemorragic Escherichia coli O157:H7-specific nucleic acid molecule
PT and a polypeptide and its use, a polypeptide, a vector and a host cell.
XX
PS Claim 2; SEQ ID NO 1258; 2067pp; Japanese.
XX
CC The invention relates to a novel enterohaemorragic Escherichia coli
CC O157:H7-specific nucleic acid molecule. A polynucleotide of the invention
CC has anti-bacterial activity. The polypeptide can be used in detection
CC and/or treatment of O157:H7 infection. The nucleotide sequence of the
CC genome of Enterohaemorragic E coli O157:H7 was determined. The present
CC sequence represents an E. coli 0157:H7-specific nucleic acid of the
CC invention.

PT   New DNA sequences from Escherichia coli strain O157:H7, useful for
PT   detecting E. coli O157:H7 in a sample, or in designing diagnostic probes
PT   which can be used to distinguish strain O157:H7 from strain K12 using
PT   molecular techniques.
XX
PS   Claim 16; SEQ ID NO 121; 33pp; English.
XX
CC   The invention relates to an isolated DNA molecule comprising an E. coli
CC   strain 0157:H7 sequence selected from a clostridial cytotoxin-like gene,
CC   a urease gene cluster, a RTX toxin-like gene cluster, a locus of
CC   enterocyte effacement and 2 genes from its associated lymphocytic phage
CC   933W (a putative serine/threonine kinase and a tail fibre gene). E. coli
CC   0157:H7 can cause food poisoning, specifically acute haemorrhagic colitis
CC   (which can develop into haemolytic uraemic syndrome). Also included are
CC   an isolated DNA molecule comprising a nucleotide sequence identical to at
CC   least 25 contiguous nucleotides contained in DNA sequences selected from
CC   ACD18988-ACD19242 (being 255 E.coli 0157 DNA sequences which are not
CC   found in E.coli K12), a recombinant DNA construction comprising the DNA
CC   above and a method for detecting E. coli 0157:H7 (ATCC 43895) in a sample
CC   (or distinguishing between 0157 and K12) using a probe derived from one
CC   of the 255 sequences. The DNA sequences are useful in detecting E. coli
CC   O157:H7 in a sample, for the early diagnosis of humans and livestock
CC   infected with O157:H7, and in designing diagnostic probes which can be
CC   used to distinguish strain O157:H7 from strain K12 using molecular
CC   techniques. The present sequence is one of the 255 E. coli 0157:H7 DNA
CC   sequence (termed OZID_1-OZID255). Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from the USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030023075 (Updated on 27-OCT-2003
CC   to standardise OS field)

PT Reagents for diagnosis, study and therapy of chronic inflammatory joint
PT and other diseases, comprises any of many specified genes or derived
PT proteins.
XX
PS Claim 1; Page; 12pp; German.
XX
CC This invention describes a novel reagent for diagnosis, molecular
CC definition and therapy of chronic inflammatory joint diseases, and other
CC inflammatory disorders, infective or tumour diseases in humans. The
CC products of the invention have antiinflammatory, cytostatic,
CC antiarthritic, antirheumatic and immunosuppressive activity and can be
CC used for gene therapy. The reagent of the invention and any proteins and
CC antibodies derived from it, are used (i) for analysing tissue and blood
CC samples for medical diagnosis; (ii) for diagnosis and characterisation of
CC chronic joint diseases, on the basis of molecular characterisation, and
CC determining the etiological pathogenicity principle of as yet
CC uncharacterised inflammatory diseases, also monitoring progression and/or
CC treatment of disease, and optimisation of therapy and (iii) for
CC developing treatments for inflammatory diseases, particularly of joints,
CC infections and tumours. ACA64801-ACA64965 represent human polynucleotides
CC used in the method of the invention

PT Reagents for diagnosis, study and therapy of chronic inflammatory joint
PT and other diseases, comprises any of many specified genes or derived
PT proteins.
XX
PS Claim 1; Page; 12pp; German.
XX
CC This invention describes a novel reagent for diagnosis, molecular
CC definition and therapy of chronic inflammatory joint diseases, and other
CC inflammatory disorders, infective or tumour diseases in humans. The
CC products of the invention have antiinflammatory, cytostatic,
CC antiarthritic, antirheumatic and immunosuppressive activity and can be
CC used for gene therapy. The reagent of the invention and any proteins and
CC antibodies derived from it, are used (i) for analysing tissue and blood
CC samples for medical diagnosis; (ii) for diagnosis and characterisation of
CC chronic joint diseases, on the basis of molecular characterisation, and
CC determining the etiological pathogenicity principle of as yet
CC uncharacterised inflammatory diseases, also monitoring progression and/or
CC treatment of disease, and optimisation of therapy and (iii) for
CC developing treatments for inflammatory diseases, particularly of joints,
CC infections and tumours. ACA64801-ACA64965 represent human polynucleotides
CC used in the method of the invention

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 28; SEQ ID NO 240; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118

CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PT   New purified and isolated DNA sequence having protein production
PT   increasing activity comprises a bent DNA element and a binding site for a
PT   DNA binding protein, useful for increasing protein production activity in
PT   eukaryotic host cell.
XX
PS   Disclosure; SEQ ID NO 123; 282pp; English.
XX
CC   The invention relates to a purified and isolated DNA sequence having
CC   protein production increasing activity comprising at least one bent DNA
CC   element, and at least one binding site for a DNA binding protein. The
CC   purified and isolated DNA sequence comprising a first and a second
CC   isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC   MAR nucleotide sequence selected from a purified and isolated DNA
CC   sequence above, a purified and isolated MAR DNA above, a purified and
CC   isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC   sequence complementary to it, its molecular chimera, or its combinations
CC   and variants, is useful for increasing protein production activity in a
CC   eukaryotic host cell. The present sequence represents a human chromosome
CC   2 contig DNA.

XX
PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 7676; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
PS Disclosure; SEQ ID NO 136; 31pp; English.
XX
CC The invention relates to a detection reagent capable of detecting one or
CC more single nucleic acid polymorphisms. The invention also relates to
CC determining whether a trait is linked to one of the human chromosomes or
CC its sub-region, a computer readable medium having stored in it the SNP
CC relational information given in the specification, an isolated nucleic
CC acid molecule for detecting at least one SNP given in the specification
CC comprising at least about 12 contiguous nucleotides, genotyping at least
CC one SNP position given in the specification in a sample, identifying an
CC individual having or at risk of developing a disorder and a kit
CC comprising at least one container containing the detection reagent.
CC Determining whether a trait is linked to one of the human chromosomes or
CC its sub-region comprises determining whether the trait is linked to one
CC or more SNPs using the detection reagents. Genotyping at least one SNP
CC position given in the specification in a sample comprises contacting the
CC sample with a detection reagent that differentiates between alternative
CC alleles at at least one SNP position given in the specification, and
CC determining which allele is present at the at least one SNP position.
CC Identifying an individual having or at risk of developing a disorder
CC comprises genotyping at least one SNP given in the specification in a
CC nucleic acid sample from the individual. The disorder is type II diabetes
CC (non-insulin dependent diabetes) or obesity. The detection reagent is
CC useful in identifying an individual having or at risk of developing a
CC disorder, particularly type II diabetes or obesity. This sequence
CC represents human genomic DNA used in the scope of the invention. Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html.

PT New nucleic acid derived from chemically treated metastasis genes, useful
PT for diagnosis of cancers by analysis of cytosine methylation, also for
PT treatment.
XX
PS Claim 1; SEQ ID NO 138; 9pp; English.
XX
CC The invention relates to a nucleic acid comprising at least 18 bases from
CC a segment of the chemically pretreated DNA of genes associated with
CC metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC least one base sequence of at least 9 bases which hybridises to (or is
CC identical with) the sequences referred to above, producing an array of
CC the oligomers on a carrier, obtaining genetic and/or epigenetic
CC parameters for diagnosis and/or therapy of diseases (or predisposition to
CC them) by analysis of cytosine methylation and a kit comprising a
CC bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC method of above 5-unmethylated cytosines in a genomic DNA sample are
CC converted chemically to uracil, or another base with hybridisation
CC properties different from those of cytosine, then fragments of the
CC treated DNA amplified (particularly by polymerase chain reaction) using
CC the oligomers and a polymerase (preferably heat stable) to produce
CC labelled amplicons. These are tested for hybridisation to an array of
CC oligomers and any hybridisation detected. The amplicons are labelled with
CC fluorescent or radioactive markers, or with a detachable mass marker to
CC allow their detection by mass spectrometry, specifically using the matrix
CC -assisted laser desorption/ionisation (MALDI) or electrospray techniques.
CC To improve detection in the mass spectrometer, fragments formed in the
CC instrument have only a single net charge (positive or negative). The
CC genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC embedded tissue sample. Oligonucleotides or peptide-nucleic acids that
CC are complementary to (or identical with) parts of the nuclei acids listed
CC above may be used as primers for amplification of the nucleic acids or
CC their complements, and for determining cytosine methylation status and/or
CC single nucleotide polymorphisms in metastasis-related genes. They can be
CC used for analysis of diseases associated with methylation of CpG
CC dinucleotides and to determine (epi)genetic parameters for diagnosis
CC and/or therapy of disease (or predisposition). The genomic DNA sequences
CC are useful for diagnosis and therapy of solid tumours and cancer. The
CC present sequence is the complementary sequence to a bisulphite treated
CC human gene associated with metastasis. Note: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030148327.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

JOURNAL Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DEFINITION  Yersinia pseudotuberculosis serogroup IVB O-antigen gene cluster,
            complete sequence.
ACCESSION   AF461769 U29691
VERSION     AF461769.1  GI:23321111
KEYWORDS    .
SOURCE      Yersinia pseudotuberculosis
  ORGANISM  Yersinia pseudotuberculosis
            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
            Enterobacteriaceae; Yersinia.
REFERENCE   1  (bases 1 to 19457)
  AUTHORS   Hobbs,M. and Reeves,P.R.
  TITLE     Genetic organisation and evolution of Yersinia pseudotuberculosis
            3,6-dideoxyhexose biosynthetic genes
  JOURNAL   Biochim. Biophys. Acta 1245 (3), 273-277 (1995)

AL929058
LOCUS       AL929058              106063 bp    DNA     linear   VRT 02-DEC-2004
DEFINITION  Zebrafish DNA sequence from clone DKEY-69H9 in linkage group 20
            Contains the gene for a novel protein similar to human and mouse
            RALBP1 associated Eps domain containing 1 (REPS1), the 5' end of
            the gene for a novel protein similar to human and mouse cytochrome
            P450, family 39, subfamily A, polypeptide 1 (CYP39A1) and two CpG
            islands, complete sequence.

COMMENT     On Nov 19, 2002 this sequence version replaced gi:24817085.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep DKEY-69H9 is
            from a Zebrafish BAC library
            VECTOR: pIndigoBAC-5
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            --------------
            Clone-derived Zebrafish pUC subclones occasionally display
            inconsistency over the length of mononucleotide A/T runs and
            conserved TA repeats. Where this is found the longest good quality
            representation will be submitted.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            Any regions longer than 1kb tagged as misc-feature 'unsure' are
            part of a tandem repeat of more than 10kb in length where it has
            not been possible to anchor the base differences between repeat
            copies.  The region has been built up based on the repeat element
            to match the total size of repeat indicated by restriction digest,
            but repeat copies may not be in the correct order and the usual
            finishing criteria may not apply.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT   Nucleic acid molecules specific for bacterial polysaccharide antigens -
PT   useful for detecting specific strains in, e.g. food, faeces or patient
PT   samples.
XX
PS   Claim 9; Fig 9; 165pp; English.
XX
CC   This is the nucleotide sequence of a gene cluster involved in the
CC   biosynthesis of the Salmonella enterica serotype C2 (strain M67) O
CC   antigen. 11 Open reading frames within the gene cluster were identified
CC   on the basis of homology to known sequences. The genes encode proteins
CC   (see AAW88323-34) involved the synthesis of sugars present in the
CC   polysaccharide antigen, and in the transport or processing of
CC   polysaccharide or oligosaccharide units. The use of nucleic acid
CC   molecules derived from assembly and transport genes, particularly wbd
CC   (transferase), wzx (flippase) and wzy (polymerase) genes, within O
CC   antigen gene clusters improves the specificity of methods for the
CC   detection and identification of O antigens, e.g. in testing food- or
CC   faecal-derived samples, or samples from patients. The O antigen is a
CC   major virulence factor of S. enterica

PT New stress-responsive nucleic acid, useful for altering the
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT stress, salt stress or osmotic stress.
XX
PS Claim 48; SEQ ID NO 14450; 89pp; English.
XX
CC The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

PT Novel nucleic acid useful for diagnosis and therapy of diseases
PT associated with development genes such as diabetes, comprises a sequence
PT of a segment of chemically pretreated DNA of genes associated with
PT development.
XX
PS Claim 1; SEQ ID NO 74; 27pp; English.
XX
CC The invention relates to a nucleic acid (I) comprising a sequence at
CC least 18 bases in length of a segment of chemically pretreated DNA (II)
CC of genes associated with development selected from 87 genes listed in the
CC specification such as ACCPN, ADFN, or AFD1 and comprising one of 350
CC sequences (ABN79984-ABN80333) or their complements. The invention is
CC useful for the diagnosis or therapy of diseases associated with
CC development genes, in particular disease related to homeobox containing
CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes
CC associated with congenital heart disease, epilepsy, diseases related to
CC histone deacetylation, Currarino syndrome, diseases related with the
CC development of the brain and limb girdle muscular dystrophy and dwarfism.
CC Oligomers specific to each of the genes are useful for detecting the
CC methylation state of all CpG dinucleotides within the 350 sequences or
CC (II) and their complementary sequences, as primer oligonucleotides for
CC the amplification of the 350 sequences, (II) and/or their complements and
CC as oligomer probes for detecting the cytosine methylation state and/or
CC single nucleotide polymorphisms (SNPs). Note: The sequence data for this
CC patent did not form part of the printed specification but is based on
CC sequence information supplied to Derwent by the European Patent Office

PT biosynthesis of ganglioside and ganglioside mimics, as diagnostic
PT reagents and as immunogen for producing antibodies.
XX
PS Claim 8; Page 101-102; 120pp; English.
XX
CC A reaction mixture for the synthesis of a sialylated oligosaccharide is
CC useful for synthesising sialylated oligosaccharide such as ganglioside,
CC lysoganglioside or their mimics. Glycosyltransferases are useful for
CC chemo-enzymatic synthesis of oligosaccharides, including gangliosides and
CC other oligosaccharides that have biological activity. The enzymes and
CC nucleic acids that encode them are useful for studies of the pathogenesis
CC mechanisms of organisms that synthesize ganglioside mimics, such as C.
CC jejuni and the nucleic acids are used as probes to study expression of
CC genes involved in ganglioside mimetic synthesis. Antibodies raised
CC against the glycosyltransferases are also useful for analyzing the
CC expression patterns of these genes involved in pathogenesis. The nucleic
CC acids are also useful for designing antisense oligonucleotides for
CC inhibiting expression of the Campylobacter enzymes that are involved in
CC the biosynthesis of ganglioside mimics that can mask the pathogens from
CC the host's immune system. The oligosaccharides are useful as diagnosing
CC reagents or as therapeutics and as immunogens for producing antibodies.
CC Bacterial glycosyltransferase can be used to catalyse the formation of
CC oligosaccharides that are identical to the corresponding mammalian
CC structures and are easier and less expensive to produce in large
CC quantity, compared to the mammalian glycosyltransferase. The bacterial
CC origin of the enzymes facilitates expression of large quantities of the
CC enzymes using relatively inexpensive prokaryotic expression systems.

CC The invention comprises the amino acid and coding sequences of
CC Campylobacter jejuni proteins. The C. jejuni proteins of the invention
CC may be either an: acyltransferase; glycosyltransferase; GalNAc (N-
CC Acetylgalactosamine) transferase; galactosyltransferase;
CC sialyltransferase; sialic acid synthase; cytidine 5'-monophosphate (CMP)
CC sialic acid synthetase; acetyltransferase. The C. jejuni DNA and protein
CC sequences of the invention are useful for ganglioside synthesis, studying
CC ganglioside mimetics, and for designing oligonucleotides to inhibit
CC expression of Campylobacter enzymes involved in the biosynthesis of
CC ganglioside mimetics that can mask the pathogen's from the host's immune
CC system. The C. jejuni oligosaccharides of the invention may be used as
CC diagnostic reagents (e.g. to locate areas of inflammation or tumour
CC metastasis). The present DNA sequence represents a Campylobacter jejuni
CC gene of the invention

PT   Novel glycosyltransferase polypeptides and polynucleotides useful for
PT   biosynthesis of ganglioside and ganglioside mimics, as diagnostic
PT   reagents and as immunogen for producing antibodies.
XX
PS   Claim 1; Page 86-90; 120pp; English.
XX
CC   A reaction mixture for the synthesis of a sialylated oligosaccharide is
CC   useful for synthesising sialylated oligosaccharide such as ganglioside,
CC   lysoganglioside or their mimics. Glycosyltransferases are useful for
CC   chemo-enzymatic synthesis of oligosaccharides, including gangliosides and
CC   other oligosaccharides that have biological activity. The enzymes and
CC   nucleic acids that encode them are useful for studies of the pathogenesis
CC   mechanisms of organisms that synthesize ganglioside mimics, such as C.
CC   jejuni and the nucleic acids are used as probes to study expression of
CC   genes involved in ganglioside mimetic synthesis. Antibodies raised
CC   against the glycosyltransferases are also useful for analyzing the
CC   expression patterns of these genes involved in pathogenesis. The nucleic
CC   acids are also useful for designing antisense oligonucleotides for
CC   inhibiting expression of the Campylobacter enzymes that are involved in
CC   the biosynthesis of ganglioside mimics that can mask the pathogens from
CC   the host's immune system. The oligosaccharides are useful as diagnosing
CC   reagents or as therapeutics and as immunogens for producing antibodies.
CC   Bacterial glycosyltransferase can be used to catalyse the formation of
CC   oligosaccharides that are identical to the corresponding mammalian
CC   structures and are easier and less expensive to produce in large
CC   quantity, compared to the mammalian glycosyltransferase. The bacterial
CC   origin of the enzymes facilitates expression of large quantities of the
CC   enzymes using relatively inexpensive prokaryotic expression systems.

PS Claim 4; SEQ ID NO 21; 282pp; English.
XX
CC The invention relates to a purified and isolated DNA sequence having
CC protein production increasing activity comprising at least one bent DNA
CC element, and at least one binding site for a DNA binding protein. The
CC purified and isolated DNA sequence comprising a first and a second
CC isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC MAR nucleotide sequence selected from a purified and isolated DNA
CC sequence above, a purified and isolated MAR DNA above, a purified and
CC isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC sequence complementary to it, its molecular chimera, or its combinations
CC and variants, is useful for increasing protein production activity in a
CC eukaryotic host cell. The present sequence represents a human matrix
CC attachment region DNA.

PT   New purified and isolated DNA sequence having protein production
PT   increasing activity comprises a bent DNA element and a binding site for a
PT   DNA binding protein, useful for increasing protein production activity in
PT   eukaryotic host cell.
XX
PS   Claim 4; SEQ ID NO 26; 282pp; English.
XX
CC   The invention relates to a purified and isolated DNA sequence having
CC   protein production increasing activity comprising at least one bent DNA
CC   element, and at least one binding site for a DNA binding protein. The
CC   purified and isolated DNA sequence comprising a first and a second
CC   isolated matrix attachment region (MAR) nucleotide sequence, which is a
CC   MAR nucleotide sequence selected from a purified and isolated DNA
CC   sequence above, a purified and isolated MAR DNA above, a purified and
CC   isolated cLysMAR element and/or fragment, a synthetic MAR sequence, a
CC   sequence complementary to it, its molecular chimera, or its combinations
CC   and variants, is useful for increasing protein production activity in a
CC   eukaryotic host cell. The present sequence represents a human matrix
CC   attachment region DNA.

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 345; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   New stress-responsive nucleic acid, useful for altering the
PT   responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT   stress, salt stress or osmotic stress.
XX
PS   Claim 48; SEQ ID NO 15671; 89pp; English.
XX
CC   The invention relates to novel abiotic stress responsive polynucleotides
CC   and polypeptides. Also disclosed are vectors, expression cassettes, host
CC   cells, and plants containing such polynucleotides. Also disclosed are
CC   methods for using the polynucleotides and polypeptides to alter the
CC   responsiveness of a plant to abiotic stress. The invention is useful in
CC   agriculture. The nucleic acid is useful for determining whether a test
CC   plant has been exposed to an abiotic stress condition. It is also useful
CC   for selecting an agent that alters abiotic stress regulated
CC   polynucleotide expression in a plant cell, and to identify a homolog or
CC   ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC   molecule and the polypeptide encoded by it are useful in altering the
CC   responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC   stress, osmotic stress or any of their combinations. The present sequence
CC   is used in the exemplification of the invention

CC (NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996,
CC NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC their complementary sequences, or a sequence (S1) chosen from 87
CC sequences and their complements. The chemical pretreatment is bisulphite
CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC Also included are an oligomer (II) in particular an oligonucleotide or a
CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC base sequence having a length of 9 nucleotides which hybridises to or is
CC identical to a chemically pretreated DNA of genes associated with
CC pharmacogenomics and their complements, arranged in an array for
CC analysing diseases associated with the methylation state (CpG) and/or
CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC and their complements is useful for diagnosis and therapy of solid
CC tumours and cancer. The present sequence represents one the 87 DNA
CC sequences or its complement. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
```

EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

            BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr
            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

RESULT 11
US-10-303-134-1/c
; Sequence 1, Application US/10303134
; Patent No. 6825019
; GENERAL INFORMATION:
;  APPLICANT: Gilbert, Michel
;  APPLICANT:  Wakarchuk, Warren W.
;  APPLICANT:  National Research Council of Canada
;  TITLE OF INVENTION: Campylobacter Glycosyltransferases for Biosynthesis of
;  TITLE OF INVENTION:  Gangliosides and Ganglioside Mimics
;  FILE REFERENCE: 019633-000111US
;  CURRENT APPLICATION NUMBER: US/10/303,134
;  CURRENT FILING DATE:  2002-11-21
;  PRIOR APPLICATION NUMBER: US/09/816,028
;  PRIOR FILING DATE: 2001-03-21
;  PRIOR APPLICATION NUMBER: US 60/118,213
;  PRIOR FILING DATE: 1999-02-01
;  PRIOR APPLICATION NUMBER: US 09/495,406
;  PRIOR FILING DATE: 2000-01-31
;  NUMBER OF SEQ ID NOS: 49
;  SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 1
;   LENGTH: 11474
;   TYPE: DNA
;   ORGANISM: Campylobacter jejuni
;   FEATURE:
;   OTHER INFORMATION: 11.5 kb PCR product from C. jejuni OH4384
;   OTHER INFORMATION: including LOS biosynthesis locus
US-10-303-134-1
